

Install the *DataManager* Chromebook App

Install the *DataManager* application on a single, domain-managed Chromebook device and remotely on individual workstations.

Before you begin, verify that you are using the latest Chromebook OS on a managed (system- or district-owned) account.

To install the *DataManager* Chromebook app:

- 1 In your Chrome browser, navigate to <https://admin.google.com>. The Admin Console opens.
- 2 Click Devices.
- 3 In the left navigation column, click **Chrome management**.
- 4 Click **Apps & Extensions**.

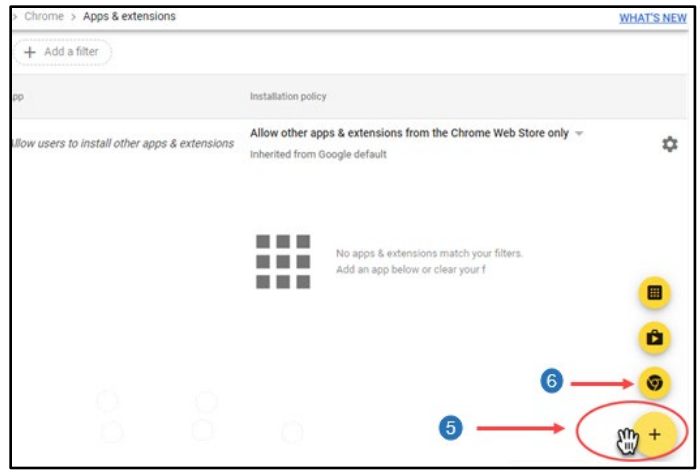

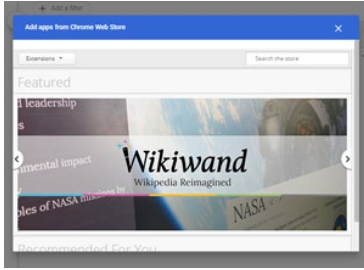

The Apps & Extensions page opens.

5 Hover over the **Add (+)** button to display option buttons above it.

6 Click the **Add from Chrome Web Store** button.

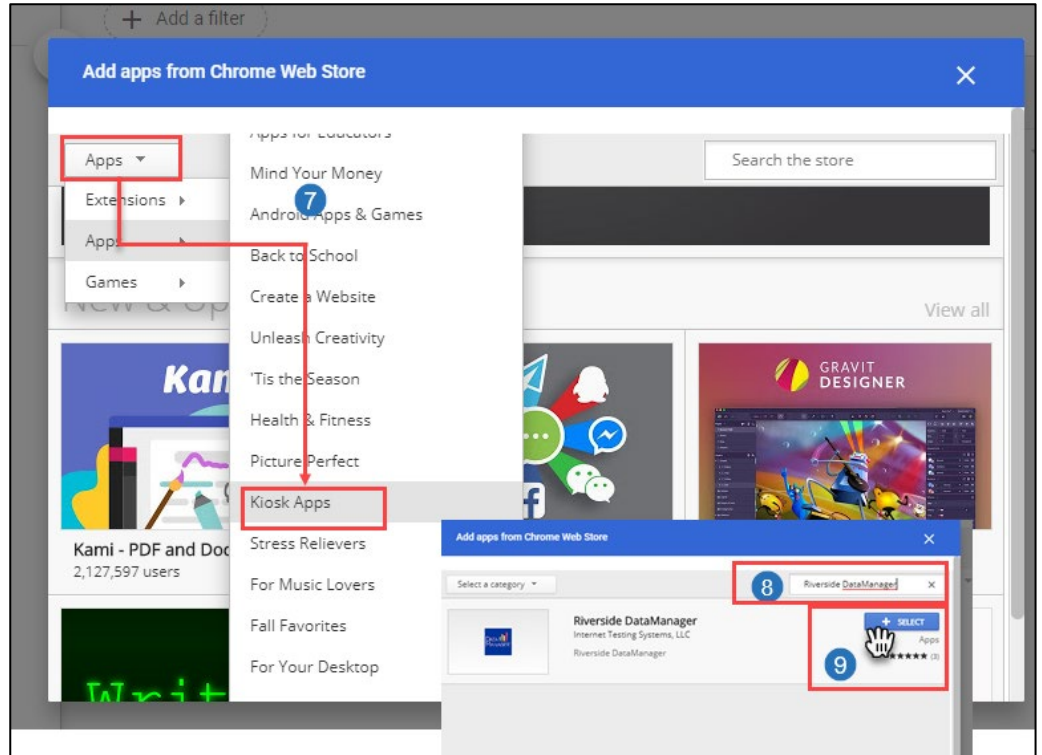

The Chrome Web Store opens.

7 From the **Apps** dropdown list, select **Apps**, then scroll down and select **Kiosk Apps**.

8 In the Search field, enter **Riverside DataManager**. Google returns the **Riverside DataManager** app in the results area.

9 Click **Select**. The Add apps from Chrome Web Store box closes, and the **Riverside Insights DataManager** app is added to your system.

Note: If your configuration is set to **Auto-Launch Kiosk App**, then the *DataManager* app automatically loads the next time the device is started. If your configuration is not set to **Auto-Launch Kiosk App**, then the sign-in screen displays a menu of kiosk apps in the system tray the next time the device starts. Select the *DataManager* app to launch it in kiosk mode.

Getting Assistance
